

MULTINATIONAL DESIGN EVALUATION PROGRAMME

4th Conference on New Reactor Design Activities

MDEP is a unique multinational initiative leveraging the resources and knowledge of national regulators to review new reactor designs. The programme recently celebrated its **10th anniversary** and is recognised as an effective framework for regulatory co-operation and harmonisation.

At this important milestone, MDEP is hoping to **gather feedback on its current activities and discuss its future**. To this end, MDEP is organising its 4th MDEP conference. The event will provide a forum for MDEP stakeholders (including industry representatives, standard development organisations and other international organisations) to share the results of their engagement with the programme and to deliver presentations on ongoing activities related to new reactor licensing.

The two-day conference will include sessions on:

- Codes and standards harmonisation;
- Digital instrumentation and controls: current and emerging technical challenges;
- Supply chain regulatory issues and vendor inspection co-operation;
- Influence of MDEP interaction on reactor designs safety;
- Commissioning activities;
- Perspectives for MDEP.

To register, please contact the NEA Secretariat at:

mdepconference2017@oecd-nea.org by 15 June 2017.
