GLOSSARY OF ACRONYMS

CND:	Coordination Network on Decommissioning of Nuclear Installations, sponsored by the European Commission Research Directorate-General
CNRA:	Committee on Nuclear Regulatory Activities of the OECD/Nuclear Energy Agency.
CPD:	Co-operative Programme on Decommissioning reporting to the RWMC of the OECD/Nuclear Energy Agency.
CRPPH:	Committee on Radiation Protection and Public Health of the OECD/Nuclear Energy Agency.
CSNI:	Committee on Safety of Nuclear Installations of the OECD/Nuclear Energy Agency.
D&D:	Decommissioning and Dismantling.
DGENV:	Directorate General of Environment of the European Commission.
DGENER:	Directorate General of Energy of the European Commission (former DGTREN).
EC:	European Commission.
EGRA:	NEA/CRPPH Expert Group on the Regulatory Application of Authorisation.
EIA:	Environmental Impact Assessment.
EURATOM:	The European Atomic Energy Community, is an international organization composed the members of the European Union established on 25 March 1957.
IAEA:	International Atomic Energy Agency.
ISBN:	International Standard Book Numbering system.
NEA:	Nuclear Energy Agency (OECD).
NDC:	Nuclear Development Committee of the OECD/Nuclear Energy Agency.
NMSS:	US Nuclear Regulatory Commission Office of Nuclear Material Safety and Safeguards.
NPP:	Nuclear Power Plant.
NRC:	Nuclear Regulatory Commission (U.S.).
PWR:	Pressurized Water Reactor.

RPV:	Reactor Pressure Vessel.
RWMC:	Radioactive Waste Management Committee of the OECD/Nuclear Energy Agency.
SEGHOFF	CSNI Special Expert Group on Human and Organizational factors, an international group of experts in human and organisational matters reporting to the NEA's Committee on the Safety of Nuclear Installations.
TEGDE:	Technical Group on Decommissioning of the IAEA.
TGDC:	Task Group on Decommissioning Costs under the Co-operative Programme on Decommissioning (CPD).
TGSC	Task Group on the Safety Case under the WPDD.
TND:	Thematic Network on Decommissioning sponsored by the European Commission Research Directorate-General.
USNRC:	see NRC.
WGIP:	Working Group on Inspection Practices under the CNRA of the OECD/Nuclear Energy Agency.
WPDD:	Working Party on Decommissioning and Dismantling under the RWMC of the OECD/Nuclear Energy Agency.
WWER:	Water Cooled Water Moderated Nuclear Power Reactor.

INTRODUCTION

Background

This document has been prepared by the Nuclear Energy Agency's (NEA's) Working Party on Decommissioning and Dismantling (WPDD) in collaboration with the European Commission's Directorate General for Energy (EC DG-ENER) and the International Atomic Energy Agency (IAEA). It is intended to assist the dissemination of information on international nuclear decommissioning and dismantling activities. The document is updated yearly and available to the wider public through the NEA website.

Organisation of this document

Following this Introduction, the document has two further chapters. The first is an Overview that describes the current aims, organisation and activities of the three main international organisations working in the field of nuclear decommissioning and dismantling (D&D), namely:

- Nuclear Energy Agency;
- European Commission; and
- International Atomic Energy Agency.

The final chapter consists of a 'D&D Map'. This catalogues current activities but its primary function is to guide the reader to useful sources of information on every aspect of D&D from policy through to implementation. It is cumulative in that the list of sources is extended at each yearly update. The D&D Map is subdivided into five main headings concerned with:

- policy;
- strategy;
- stakeholder information and involvement;
- transition phase after shutdown; and
- implementation.

Under each heading, the sources are listed as responses to a series of questions. For example, under the main heading of 'Policy', the first question is 'What are the current and planned decommissioning policies in the individual countries?'; the responses then show where this information might be obtained and any relevant ongoing activities.

The document also includes three appendices that list documents relating to D&D published by NEA, EC and IAEA. These appendices therefore present much the same information as the D&D Map, though in a different format.

OVERVIEW

OECD Nuclear Energy Agency (NEA)

Within the NEA, decommissioning is discussed within several Standing Technical Committees, namely:

- Radioactive Waste Management Committee (RWMC) - of which the WPDD forms a part.
- Committee on Nuclear Regulatory Activities (CNRA).
- Committee on Safety of Nuclear Installations (CNSI).
- Committee on Radiation Protection and Public Health (CRPPH).
- Nuclear Development Committee (NDC).

A complete list of NEA documents relating to D&D is presented in Appendix A. The NEA programme of work in the area of decommissioning includes the following:

Radioactive Waste Management Committee (RWMC)

The RWMC is an international committee made up of senior representatives from regulatory authorities, radioactive waste management agencies, policy making bodies and research and development institutions. Its purpose is to foster international co-operation in the management of radioactive waste and radioactive materials amongst the OECD member countries. RWMC's work in the field of D&D is progressed through two sub-groups:

- Working Party on Decommissioning and Dismantling (WPDD) was formed in 2001 to address the policy and regulatory aspects of decommissioning – see below. It is the only NEA Working Party that is fully concerned with decommissioning.
- The Forum on Stakeholder Confidence (FSC) was formed in 2000 and is charged with investigating and distilling the lessons that can be learnt from national and international experience regarding decision-making processes and avenues for stakeholder involvement in radioactive waste management (including D&D).

In addition, the Co-operative Programme for the Exchange of Scientific and Technical Information Concerning Nuclear Installation Decommissioning Projects (CPD¹) works to share industrial, project-level experience among decommissioning projects – see below.

The Working Party on Decommissioning and Dismantling (WPDD)

The Working Party on Decommissioning and Dismantling (WPDD) of the RWMC is the focus for the analysis of decommissioning policy, strategy and regulation within the NEA, including issues relating to the management of materials, the release of buildings and sites from regulatory control and associated costs and funding. It tracks decommissioning developments worldwide and develops

1. An overview of the work of the CPD is presented in *The NEA Co-operative Programme on Decommissioning A Decade of Progress* available at <http://www.nea.fr/html/rwm/reports/2006/nea6185-decommissioning.pdf>.

reports and position papers on emerging issues. Its overarching aim is to contribute to the development of best practice through circulation of its reports and through dialogue between policy makers, practitioners, regulators, researchers and international organisations.

Beyond policy and strategy considerations, the WPDD's programme of work also addresses practical considerations for implementation such as techniques for characterisation of materials, techniques and equipment for decontamination, cutting and dismantling - with and without remote operation.

The WPDD brings together senior experts in decommissioning from 19 OECD countries and from the European Commission and the IAEA. Its members include policy specialists, regulators, implementers, researchers and waste management specialists. The group meets once each year, either at NEA's offices (Issy-les-Moulineaux) or at a host location that rotates among the member countries. Each meeting normally includes a topical session on an issue of special interest and a session focusing on the framework for decommissioning in the host country. Associated with this, the host country normally arranges a visit to a local decommissioning facility.

An important role of the WPDD is to facilitate the exchange of experience amongst its members and promote the further understanding of specific aspects. This is achieved through workshops and working sessions on issues of topical interest, through projects undertaken by task teams made up of experts from the participating organisations, and through collaboration with other groups working in the field of decommissioning. The latter include the NEA's Cooperative Programme on Decommissioning (CPD) (see below), as well as decommissioning groups within the IAEA and the European Commission. WPDD also works closely with the NEA's Forum on Stakeholder Confidence (FSC), to help develop the links between decommissioning, decision-making and public confidence and acceptance, and with the RWMC Regulators' Forum on regulatory issues that are of strategic interest. The current (and recent) work programme of the group includes issues ranging from regulation of decommissioning², the release of materials and buildings from regulatory control³, stakeholder involvement in decommissioning⁴, as well as ongoing studies on the management of large components from decommissioning and on R&D and innovation needs in decommissioning.

Decommissioning Cost Estimation Group (DCEG)

At the beginning of 2008 the WPDD established the Decommissioning Cost Estimation Group (DCEG), a specialist sub-group to foster the exchange of information and experience on the specific topic of estimating costs for decommissioning. In 2009 the group completed a study on the cost drivers and reporting requirements for decommissioning and in 2011 the *International Structure for Decommissioning Costing* as a joint initiative of the NEA, EC, and IAEA.

The NEA CPD Programme

The NEA Co-operative Programme for the Exchange of Scientific and Technical Information Concerning Nuclear Installation Decommissioning Projects (CPD) is a joint undertaking involving 23 organisations actively executing or planning the decommissioning of nuclear facilities. There are in total 59 decommissioning projects participating in the programme, from 13 countries and the European Union. The objective of the CPD is to acquire and to share information from operational experience in the decommissioning of nuclear installations that is useful for future projects.

2. *Regulating the Decommissioning of Nuclear Facilities* (2008) [NEA No. 6401] (also in French).

3. *The Release of Materials and Buildings* (2008) [NEA No. 6403] (also in French).

4. *Stakeholder Issues and Involvement in Decommissioning Nuclear Facilities* (2007) [NEA No. 6320] (also in French).

Committee on Nuclear Regulatory Activities (CNRA)

The CNRA is an international committee made up of senior representatives from regulatory bodies. It was created in 1989 to guide NEA's programme concerning the regulation, licensing and inspection of nuclear installations with regard to safety. CNRA's work covers regulation of all nuclear activities including D&D.

Committee on Safety of Nuclear Installations (CNSI)

The Committee on the Safety of Nuclear Installations (CSNI) is made up of senior scientists and engineers, with broad responsibilities for safety technology and research programmes, and representatives from regulatory authorities. The CNSI was established to assist member countries in maintaining and further developing the scientific and technical knowledge base required to assess the safety of nuclear reactors and fuel cycle facilities including, of course, their decommissioning.

Committee on Radiation Protection and Public Health (CRPPH)

The CRPPH is made up of regulators and radiation protection experts, with the broad mission to provide timely identification of new and emerging issues, to analyse their possible implications and to recommend or take action to address these issues to further enhance radiation protection regulation and implementation. The regulatory and operational consensus developed by the CRPPH on these emerging issues supports policy and regulation development in Member countries, and disseminates good practice including decommissioning. The Committee's work on the evolving system of radiological protection, independently and with the ICRP, and on stakeholder involvement in decision making are directly related to the release of sites, facilities and materials from radiological and regulatory control.

Nuclear Development Committee (NDC)

The Committee for Technical and Economic Studies on Nuclear Energy Development and the Fuel Cycle, known generally as the Nuclear Development Committee (NDC), was established in 1977. It aims to provide authoritative, reliable information on nuclear technologies, economics, strategies and resources to governments for use in policy analyses and decision making. In terms of D&D, the committee has a particular interest in the financial implications of decommissioning nuclear facilities.

European Commission (EC)

At the centre of the European energy policy, approved by the Spring Summit of the European Council in 2007, lie three criteria: competitiveness, security of supply and sustainability. Already, nuclear energy is making a substantial contribution to the EU energy policy as part of the energy mix in currently 14 EU Member States, with 134 nuclear power plants in operation.⁵

Nuclear energy can only have a realistic chance to contribute substantially to the future energy mix in Europe if a high level of safety, the long-term management of radioactive waste and the financing of decommissioning are guaranteed.

5. See webpage European Nuclear Society <http://www.euronuclear.org/info/encyclopedia/n/nuclear-power-plant-europe.htm> 21.12.2012

Regulatory framework

With the adoption by the European Council of the Nuclear Safety Directive⁶ on 25 June 2009 a major step has been made for achieving a common legal framework and a strong safety culture in Europe. The Directive requires Member States in particular to set up and continuously improve national nuclear safety frameworks. The Directive enhances the role and independency of national nuclear regulatory authorities, confirming license holders the prime responsibility for nuclear safety. Member States are required to encourage a high level of transparency of regulatory actions and to guarantee regular independent safety assessments. This Directive applies to any civilian nuclear installation operating under a license as defined in Article 3(4) of the Directive at all stages covered by this license including the decommissioning of the nuclear installation.

Council Directive 2011/70/Euratom of 19 July 2011 establishing a Community framework for the responsible and safe management of spent fuel and radioactive waste complements the safety directive in proposing safety standards for the management of spent fuel and radioactive waste from nuclear power plants as well as from medicine or research. The Member States have to transpose the Directive into national law before 23rd August 2013. In the Directive '*radioactive waste management*' means all activities that relate to handling, pre-treatment, treatment, conditioning, storage, or disposal of radioactive waste excluding off-site transportation. By this definition D&D falls within the scope of the Council Directive.

The EC has set up an EU legally binding and enforceable framework to ensure that all Member States will apply the common standards developed in the context of the IAEA for all stages of spent fuel and radioactive waste management up to final disposal. It imposes on Member States to draw up national programmes for the management of spent fuel and radioactive waste that have to be notified to the EC, for the first time not later than 23rd August 2015. It establishes information to the public and public involvement in the decision making process.

The focus of the European Commission's activities in the field of decommissioning is fully inscribed in the aforementioned context. Decommissioning has become an industrial reality and it is anticipated that approximately one third of the 134 nuclear power reactors operating within the EU will be in decommissioning by 2025.

The work of the European Commission has shifted accordingly from supporting technological R&D projects towards the financing of decommissioning and the management of the required decommissioning funds as well as the implementation of an assistance programme in three EU Member States for the decommissioning of old Soviet design reactors. Also, through the Directorate General *EuropeAid Development & Cooperation (DEVCO)*, the EU is supporting the decommissioning of nuclear installations in countries like Ukraine, Russia and Kazakhstan.

The Commission is committed to reporting on a regular basis to the European Parliament and the Council on the progress in the field of EU decommissioning policy and the implementation of the decommissioning assistance programme in the three EU Member States.

A list of EC documents on D&D is provided in Appendix B.

Ongoing and recently completed initiatives are described in the paragraphs that follow.

6. OJ L 172/18, 2.7.2009

Decommissioning Recommendation and 2nd Report

In the context of the EC Directive concerning the rules for the internal market in electricity⁷, nuclear decommissioning funding schemes within the EU became subject to high level political discussions. Concerns were expressed as to the possible adverse effects of the misuse of financial resources earmarked for decommissioning of nuclear plants and the management of waste. An inter-institutional statement in July 2003⁸ set the ground for Community action, highlighting the need for adequate financial resources for decommissioning and waste management activities to be available for the purpose for which they have been established and to be managed with full transparency. After the publication of a first report⁹ by the Commission on this issue, the EC published a recommendation on the management of financial resources in 2006¹⁰ in order to propose measures to address these concerns.

The second report¹¹ and its related working document¹² published at the end of 2007 goes beyond the content of the first report. It covers also research reactors as well as other fuel cycle facilities and provides more details on the management and use of financial resources earmarked for decommissioning in the EU. The second report presents information on

- funding arrangements
- decommissioning cost estimation
- adequacy of financial resources
- use of decommissioning funds
- transparency

and compares funding practices in the Member States with the Commission Recommendation. The first and second report with their corresponding working documents and the Commission Recommendation can be found on the Europa website under:

http://ec.europa.eu/energy/nuclear/publications/decommissioning_en.htm.

The follow-up of the findings from the second report and the further use of the Commission Recommendation were addressed by the EC with the support of the Decommissioning Funding Group (DFG). The DFG is an expert group with nominated representatives from all EU Member States, created to assist the EC in the development of its decommissioning policy. The EC and DFG have jointly elaborated a Guide to have a commonly agreed interpretation of the Commission Recommendation as well as for its practical implementation. Following the finalisation of the Guide a Member State consultation process has been launched to assess the alignment of the Member States practices in the management of decommissioning funds with the Recommendation. The results of this consultation will form the basis for the 3rd report from the Commission to the Council and Parliament foreseen for mid 2012.

7. Directive 2003/54/EC of the European Parliament and of the Council of 26 June 2003 concerning common rules for the internal market in electricity and repealing Directive 96/92/EC.

8. OJ L 176, 15.7.2003.

9. Report on the use of financial resources earmarked for the decommissioning of nuclear power plants, COM(2004) 719, 26.10.2004.

10. Commission Recommendation on the management of financial resources for the decommissioning of nuclear installations, spent fuel and radioactive waste, OJ L 330/31, 28.11.2006.

11. Second report on the use of financial resources earmarked for the decommissioning of nuclear installations, spent fuel and radioactive waste, COM(2007) 794 final, 12.12.2007

12. Commission Staff Working Document *EU Decommissioning Funding Data*, SEC(2007) 1654, 12.12.2007

Decommissioning Cost Estimation Group (DCEG)

The adequacy of financial resources to be set aside for decommissioning, spent fuel and waste management can only be assessed based upon a sound and reliable estimation of the required costs. This is why the Commission is actively contributing to the DCEG of the NEA and in particular to the project the *International Structure for Decommissioning Costing* (see above).

EU Nuclear Decommissioning Assistance Programme

In addition to elaborating with the Member States a common understanding on the financing of decommissioning the EC implements the Nuclear Decommissioning Assistance Programme in three Member States. This programme provides financial support to Lithuania, Slovakia and Bulgaria based on the Treaty of Accession. The Treaty foresees early closure and subsequent decommissioning of Ignalina Unit 1&2 (Lithuania), Bohunice V1 Unit 1&2 (Slovakia) and Kozloduy Unit 1-4 (Bulgaria). Because this early closure represents exceptional financial burden not commensurate with the size of economic strength of each country, financial support of the European Union is provided. The financial support includes:

- projects for decommissioning and waste management; and
- projects in the energy sector to mitigate the closure consequences (ex. replacement capacity for electricity production, energy efficiency measures ...).

The overall financial support for the three programmes totals some € 2 830 million. This covers the EU support for Lithuania, Slovakia and, following the adoption in July 2010 of a new legal basis for the extension of financial support after 2009 to the Kozloduy Programme, also for Bulgaria up to 2013, the end of the current EU financial perspective.

Regarding the further financial EU assistance beyond 2013, the EC has made a proposal in November 2011 for additional €500 million to support the decommissioning in Bulgaria, Lithuania and Slovakia. These funds will contribute to the continuation of safe decommissioning of the nuclear power plants Kozloduy, Ignalina and Bohunice. This new financial assistance should support the efforts of the three Member States who are ultimately responsible for nuclear safety, including the financing of decommissioning. The Union assistance for decommissioning of nuclear power plants aims at reaching an irreversible state in the decommissioning process and eliminating the major source of radiological hazard.

Technical studies related to decommissioning

The EC has completed several technical studies related to decommissioning in support of its activities. The final reports on the following studies are also available at the above mentioned EUROPA website:

- Analysis of factors influencing the selection of strategies for decommissioning of nuclear installations.
- Inventory of best practices in the decommissioning of nuclear installations.
- Comparison among different decommissioning funds methodologies for nuclear installations.
- Analysis of environmental, economic and social issues related to the decommissioning of nuclear installations.

Research related activities on decommissioning

The research-related activities on decommissioning were carried out within the Framework Programme for the European Union's research, technological development and demonstration. These activities represented a long-standing effort in this area, started in the early Eighties. Two networks completed their work in recent years. The first one was the *Thematic Network on Decommissioning* involving some fifty organisations and that covered all aspects specific to decommissioning, from technological to legal or strategic issues. The second one was the *Project EC Decommissioning Information Network*¹³, which integrated previously created databases on decommissioning costs and tools in a single platform accessible via Internet. Both activities were part of the *Coordination Network on Decommissioning of Nuclear Installations* – see <http://ec-cnd.net> – which was sponsored by the EC.

International Atomic Energy Agency (IAEA)

The International Radioactive Waste Technical Committee (WATEC) is a working group of senior international experts in radioactive waste management, decommissioning and environmental remediation, with particular emphasis on strategies, implementation, technologies and methodologies.

WATEC advises the IAEA Secretariat on programme activities and directions related to radioactive waste management and decommissioning strategies and implementation for radioactive waste from all past and present sources and activities. WATEC also provides a forum for information and knowledge sharing on national and international programmes development in these areas.

WATEC Members come from various types of organizations having responsibilities for different aspects of radioactive waste management: waste management authorities, waste generators, research institutes, regulatory bodies, government ministries and waste disposal organizations. It is geographically diverse and contains members from countries having a range of uses of nuclear and radioactive materials for electricity generation and nuclear applications. Its members have expertise in management of wastes from their arising through disposal, including management of wastes arising from decommissioning of nuclear facilities and management of disused sealed radioactive sources.

To facilitate international coordination, representatives of the OECD Nuclear Energy Agency and the European Commission are invited to attend WATEC meetings as observers.

In parallel, the Waste Safety Standards Committee (WASSC) is a standing body of senior experts in the safety of radioactive waste management. WASSC advises on the overall programme for the development, review and revision of standards relating to radioactive waste safety (i.e. waste management, waste treatment and safety of disposal facilities, and decommissioning). Its objective is to achieve consensus, quality, coherence and consistency in the development of international standards for radioactive waste safety.

Safety Standards

The IAEA has a long-standing comprehensive programme of work on decommissioning and has published a number of safety standards and technical reports on various aspects of decommissioning of facilities using radioactive material. The decommissioning safety standards include:

13. The European Thematic Network on Decommissioning of Nuclear Installations [<http://www.ec-tnd.net/>]

- Safety Requirements, *Decommissioning of Facilities Using Radioactive Material* (WS-R-5), which was published in 2006.
- Safety Guide, *Decommissioning of Nuclear Power Plants and Research Reactors* (WS-G-2.1), which was published in 1999.
- Safety Guide, *Decommissioning of Medical, Industrial, Research Facilities* (WS-G-2.2), which was published in 1999.
- Safety Guide, *Decommissioning of Nuclear Fuel Cycle Facilities* (WS-G-2.4), which was published in 2001.
- Safety Guide, *Release of Sites from Regulatory Control upon Termination of Practices* (WS-G-5.1), which was published in 2006.
- Safety Guide, *Safety Assessment for Decommissioning of Facilities Using Radioactive Material* (WS-G-5.2), which was published in 2008.
- Safety Guide, *Application of the Concept of Exclusion, Exemption and Clearance* (RS-G-1.7), which was published in 2004.

The Safety Requirements, as well as, the three safety guides, WS-G-2.1, WS-G-2.2 and WS-G-2.4, are currently undergoing revision.

International Decommissioning Network (IDN)

The IDN was established in 2007 to coordinate and build efforts aimed at assisting Member States in the sharing of practical decommissioning knowledge and thereby improving their ability to undertake decommissioning work. Within the IDN, implementing, regulatory and research organizations involved in decommissioning and agree to share their experience. IDN facilitates several training events each year, which are directed mainly at young professionals taking up decommissioning responsibilities. In 2011 these included:

- A training course on decommissioning and environmental remediation at Argonne National Laboratories;
- Workshops on the cleanup of uranium handling facilities (South Africa), cutting technologies for decommissioning (Germany) and on the use of gamma scanning technology for characterisation and visualisation in decommissioning (France); and
- Scientific visits to France on large component strategic management and size reduction and to Slovakia on decommissioning of small nuclear facilities.

Other Recent and Forthcoming D&D initiatives

- In 2006, the Agency initiated the Research Reactor Decommissioning Demonstration (“R2D2”) Project to assist Member States in planning and implementation of safe decommissioning of research reactors. The R2D2 project aims to demonstrate in particular the application and use of the Agency’s safety standards and best practices during the actual decommissioning of facilities from the planning stage through to the termination of decommissioning.
- Following the successful completion of the international project on Evaluation and Demonstration of Safety of Decommissioning of Nuclear Facilities (DeSa project, 2004 - 2007), in 2008 the IAEA launched the follow-up international project on the Use of Safety Assessment Results in the Planning and Implementation of Decommissioning (“FaSa”)

(<http://www-ns.iaea.org/tech-areas/waste-safety/fasa/>). The final plenary meeting of the FaSa project took place in November 2011 and the final project report is now in preparation.

- In February 2006, the IAEA initiated a new project on providing technical assistance to Iraq. The objective of the project is to assist the Government of Iraq with the evaluation and decommissioning of the facilities that have used radioactive material in the past and were damaged by the Gulf wars and subsequent looting. The Agency project has progressed well and continued support is being given by experts from France, Germany, Italy, UK, Spain, South Africa, Canada, United Kingdom, Ukraine and the USA. Project information and results are available on the Agency's website. A draft nuclear law was been prepared in 2008, as well as regulations covering decommissioning, radiation protection and waste management. The project has enabled Iraqi experts to draft policy and strategy documents for the management of radioactive waste. In addition, the Government of Iraq has begun decommissioning a few lightly contaminated sites in line with the prioritisation of decommissioning activities agreed in 2007. Support for these decommissioning activities is provided to Iraq via a practical training programme in decommissioning, radiation protection, waste management and waste disposal.
- As part of its wider programme of technical assistance to Member States, IAEA is providing support in the planning for decommissioning of NPPs, research reactors, fuel cycle and other radiological facilities. This assistance is organised at a regional and country specific basis. The current projects are RER/9120 ("Supporting decommissioning implementation for facilities using radioactive material") and TC project INT/9175 ("Promoting safe and efficient cleanup of radioactively contaminated facilities and sites"). These projects provide assistance to operators and regulators in a number of Member States with facilities that will require being decommissioned, comprising training workshops and expert missions to advise on specific aspects or facilities. Country-specific advice is organised through national projects (<http://www-tc.iaea.org/tcweb/default.asp>).
- In response to increased requests from the decommissioning industry for independent technical reviews, the Agency has launched a new review service for planned and ongoing decommissioning projects. Designed to complement the Agency's OSART service, the international decommissioning review service will provide an independent review of the activities associated with the planning and implementation of decommissioning in accordance with the international safety standards, other relevant recommendations and good practice in Member States. The first review was performed at the Bradwell site (Magnox NPP) in UK in June-July 2008, with a follow-up review in June 2011. The outcomes of this review will be published during 2012.
- Since 1980, the Power Reactor Information System (PRIS) has been collecting in a computerised form detailed information on nuclear power plants worldwide, including reactor design characteristics, plant general specifications and operating experience data. In 2005 PRIS was expanded and a new module gathers online information on decommissioning data such as reasons for shutdown, decommissioning strategy and milestones, fuel and waste management, and main contractors. Brief information on PRIS is given in Annex III of TRS No. 428.
- A list of safety standards, technical reports, and other documents published by IAEA since 1990 is contained in Appendix C.

DETAILED D&D MAP

Structure of the D&D Map

Sources of D&D information are listed under five main headings in response to a series of questions, as itemised below.

1. Policy

- 1.1 *What are the current and planned decommissioning policies in the individual countries?*
- 1.2 *What are the main elements of a national policy?*
- 1.3 *What are the ethical principles that have impact on decommissioning?*
- 1.4 *How is licensing structured?*
 - 1.4.1 *What kind of regulation is needed for decommissioning?*
- 1.5 *Will all national D&D sites be returned for unrestricted (or restricted) use?*
- 1.6 *On which basic regulatory principles and/or approaches ought clearance and recycling of material to be handled?*
- 1.7 *What are the necessary funding arrangements?*
 - 1.7.1 *How are financial guarantees built into the D&D policy and its implementation?*
 - 1.7.2 *What are funding schemes including decommissioning liabilities?*
- 1.8 *How should D&D be regulated to ensure the necessary safety and environmental protection?*

2. Strategy

- 2.1 *When is it suitable to carry out D&D? Which decommissioning option should be used - deferred, immediate or safe enclosure?*
 - 2.1.1 *For how many years is safe storage suitable?*
- 2.2 *How dependent is the D&D strategy on the existence of waste management policies and facilities?*
 - 2.2.1 *How is the D&D strategy harmonised with the long-term waste management strategy?*
 - 2.2.2 *What waste disposal arrangements (especially repositories) and precautions are necessary?*
- 2.3 *At what cost - also radiological - should dismantling be carried out?*
- 2.4 *How does one arrive at generic estimates of dismantling costs as function of D&D strategy in order to determine decommissioning funding costs?*

3. Implementation

3.1 *What should be the contents of an EIA for D&D?*

3.2 *How is a safety case set up and managed?*

3.2.1 *What are the elements of a D&D safety case?*

3.2.2 *How wide is the range of assumptions needed for accident analysis?*

3.2.3 *What is the experience and lessons learned that can be fed back to the process of regulating decommissioning activities including criteria for judging safety cases?*

3.3 *What type of organisation or implementing framework is best to carry out the D&D programme?*

3.4 *What are the R&D needs?*

3.4.1 *Decontamination and dismantling techniques*

3.4.2 *What R&D has been done for very radioactive reactor internals?*

3.4.3 *What R&D has been done for dismantling concrete and its reuse?*

3.4.4 *What R&D has been done for decontamination of metals?*

3.4.5 *What R&D has been done for dealing with 'exotic' and toxic materials (like Na, NaK, Be, Graphite...)*

3.5 *How can costs for individual industrial projects be estimated?*

3.6 *What clearance procedures should be implemented for materials?*

3.7 *What clearance procedures should be implemented for sites?*

3.8 *How to perform the release measurement for very large volumes of materials and complex geometry?*

3.9 *What waste treatment technologies have been found to work and what have not?*

3.9.1 *How are special waste items to be dealt with, e.g. large items and reactor internals?*

3.9.2 *What are good practices for volume reduction?*

4. Stakeholder Information and Involvement

4.1 *Informing stakeholders on the safety and manageability of the D&D process*

4.2 *How can the general public be involved in the EIA process?*

4.3 *Who are the stakeholders?*

5. Transition Phase

5.1 *What are the special aspects of the transition phase from facility operation to decommissioning?*

1. Policy

Decommissioning *Policy* is taken to include all aspects of a government's approach to decommissioning issues. For example, any requirements regarding the ultimate use of decommissioned sites, waste management policy, public and worker health and safety policies, environmental safety policies, policies for the clearance of materials and regional development aspects.

1.1 What are the current and planned decommissioning policies in the individual countries?

- Country profiles, including statements of policy with respect to D&D activities are accessible at [<http://www.nea.fr/html/rwm/wpdd/welcome.html>].
- In September 2002 the NEA/WPDD issued a booklet on *The Decommissioning and Dismantling of Nuclear Facilities: Status, Approaches, Challenges*. The booklet is freely accessible on the web and can be downloaded from: [<http://www.nea.fr/html/rwm/reports/2002/3714-decommissioning.pdf>].
- The NEA/NDC has released a report titled *Decommissioning Nuclear Power Plants: Policies, Strategies and Costs* ISBN: 92-64-10431-3. The publication can be purchased in E-book (PDF-format) from the NEA website.
- The EC adopted the *Council Directive 2011/70/Euratom of 19 July 2011 establishing a Community framework for the responsible and safe management of spent fuel and radioactive waste*. The Member States have to transpose the Directive into national law before 23rd August 2013. The directive explicitly refers to appropriate decommissioning practices in order to keep the generation of radioactive waste to the minimum practicable. It also requires considering decommissioning in the preparation of a safety case and supporting safety assessment for radioactive waste management facilities.
- The EC has published in its Official Journal (OJ L 330/31, 28.11.2006) the Commission Recommendation on *the management of financial resources for the decommissioning of nuclear installations, spent fuel and radioactive waste*. The recommendation can also be downloaded from the Europa website: http://ec.europa.eu/energy/nuclear/publications/decommissioning_en.htm.
- The EC published in 2007 its second report to the European Parliament and the Council on *the use of financial resources earmarked for the decommissioning of nuclear installations, spent fuel and radioactive waste*. The report compares funding practices in the Member States with the Commission Recommendation. The first (from 2004) and second report with their corresponding working documents can be downloaded from the EUROPA website: http://ec.europa.eu/energy/nuclear/publications/decommissioning_en.htm.
- In 2004 the IAEA published a *Status of the Decommissioning of Nuclear Facilities around the World*, see under "Other" in Appendix C.

1.2 What are the main elements of a national policy?

- The NEA WPDD and NDC publications mentioned in Section 1.1 are useful to this effect. Additionally, NEA/RWMC held a topical session (March 2003) on *Liabilities identification*

and management at a national level. The proceedings were issued in October 2003 and is publicly available at the NEA website with document number [[NEA/RWM\(2003\)14](#)]¹⁴.

- The EC adopted the *Council Directive 2011/70/Euratom of 19 July 2011 establishing a Community framework for the responsible and safe management of spent fuel and radioactive waste*. The Member States have to transpose the Directive into national law before 23rd August 2013 and to align their national policy accordingly.
- The EC published in July 2011 its report¹⁵ to the European Parliament and the Council on the use of financial resources during 2004 – 2009 provided to Lithuania, Slovakia and Bulgaria to support the decommissioning of early shut-down nuclear power plants under the Act of Accessions.
- The EC adopted in November 2011 a Proposal for a Council Regulation¹⁶ on Union support for the nuclear decommissioning assistance programmes in Bulgaria, Lithuania and Slovakia for additional support after 2013.
- The EC completed four studies
 - *Analysis of factors influencing the selection of strategies for decommissioning of nuclear installations.*
 - *Inventory of best practices in the decommissioning of nuclear installations.*
 - *Comparison among different decommissioning funds methodologies for nuclear installations.*
 - *Analysis of environmental, economic and social issues related to the decommissioning of nuclear installations.*
 - The final report of all four studies can be downloaded from the EUROPA website: http://ec.europa.eu/energy/nuclear/publications/decommissioning_en.htm.
- *Strategies, Policies and Funding in Decommissioning* is a Working Area of the CND. For more information, please consult: <http://ec-cnd.net/>.
- The IAEA has published a technical report (TRS No. 462, 2008) dealing *inter alia* with the dispositioning of lower level decommissioning waste and materials. It illustrates several industrial options to safely and cost-effectively manage materials and waste resulting from decommissioning.
- In 2012 the IAEA published NW-G-2.1 *Policies and Strategies for the Decommissioning of Nuclear and Radiological Facilities*. This report discusses policies and strategies of decommissioning, including safety and non-safety-related factors such as national infrastructure and priorities, financial constraints, radiological and industrial safety. It supersedes an earlier report on this topic published in 2005 (TECDOC-1478, *Selection of Decommissioning Strategies: Issues and Factors*) which focused on national policies and strategies and provided examples of these.
- An IAEA Safety Report *Decommissioning Strategies for Facilities Using Radioactive Material* was published in 2007 (SRS No. 50). It discusses specific safety issues related to

14. See webpage: <http://www.nea.fr/html/rwm/docs/2003/rwm2003-14.pdf>

15 COM(2011)432 final

16 COM(2011)783 final

the three main decommissioning strategies – immediate dismantling, deferred dismantling and entombment.

1.3 What are the ethical principles that have impact on decommissioning?

- OECD, *The Implementation of the Polluter Pays Principle*. Recommendations by the Council on 14 November, 1974
- OECD, Recommendation of the Council concerning *the Application of the Polluter-Pays Principle to Accidental Pollution*, 7 July 1989, C(89)88/Final.
- Joint Convention on *the Safety of Spent Fuel Management and on the Safety of Radioactive Waste Management*. An associated descriptive document was published by the IAEA in 2006.
- Rio Declaration 1992 on Environment and Development (Principle 16).
- *The Principles of Radioactive Waste Management*, IAEA Safety Series No. 111-F, 1995
- Council Directive 97/11/EC of 3 March 1997 amending Directive 85/337/EEC on *the assessment of the effects of certain public and private projects on the environment*.
- Directive 2001/42/EC of the European Parliament and of the Council of 27 June 2001 on *the assessment of the effects of certain plans and programmes on the environment*.
- European Commission Guidance on the implementation of Directive 2001/42/EC on *the assessment of the effects of certain plans and programmes on the environment*.
- Directive 2003/4/EC of the European Parliament and of the Council of 28 January 2003 on public access to environmental information and repealing Council Directive 90/313/EEC.
- Nuclear Safety and the Environment. *Environmental Impact Assessment for the Decommissioning of Nuclear Installations*. Report under EC Contract B4-3040/99/MAR/C2 by Cassiopee, University of Wales and ECA Global. EUR 2005, June 2001, Revised February 2002.
- Directive 2003/35/EC of the European Parliament and of the Council of 26 May 2003 providing for public participation in respect of the drawing up of certain plans and programmes relating to the environment and amending with regard to public participation and access to justice Council Directives 85/337/EEC and 96/61/EC.
- EU Council Directive 2011/70/Euratom of 19 July 2011 establishing a Community framework for the responsible and safe management of spent fuel and radioactive waste, including also the management of radioactive waste from D&D, establishes information to the public and public involvement in the decision making process.
- Communication from the Commission to the European Parliament and the Council. Second report on the use of financial resources earmarked for the decommissioning of nuclear installations, spent fuel and radioactive waste. COM/2007/794 final; Commission Staff Working Document *EU Decommissioning Funding Data*, SEC(2007)1654.
- Commission Recommendation on *the management of financial resources for the decommissioning of nuclear installations, spent fuel and radioactive waste*. OJ L 330/31, 28.11.2006.
- NEA/WPDD Status Report, 2006, *Decommissioning Funding: Ethics, Implementation, Uncertainties*, NEA No. 5996.

- *Council Directive 2009/71/EURATOM of 25 June 2009 establishing a Community framework for the nuclear safety of nuclear installations.* OJ L 172/18, 2.7.2009.

1.4 How is licensing structured?

- The NEA/WPDD information platform of national fact sheets contains relevant information (see section 1.1). Information can also be found in the RWMC information platform on the *Regulatory Control of Radioactive Waste in 19 NEA member countries*: <http://www.nea.fr/html/rwm/rf/welcome.html>. Additional information can be found in the CRNA document *The Regulatory Challenges of Decommissioning Nuclear Reactors*, NEA#04375, ISBN: 92-64-02120-5, available on the Web at: [<http://www.nea.fr/html/nsd/reports/nea4375-decommissioning.pdf>]. The issue was also discussed in Session 7 of the workshop *Safe, Efficient, and Cost-effective Decommissioning* held in Rome September 2004, see proceedings on CD-Rom published in 2005.

1.4.1 What kind of regulation is needed for decommissioning?

- IAEA has issued Safety Requirements and Safety Guides dealing with decommissioning:
 - WS-R-5 Decommissioning of Facilities Using Radioactive Material ;
 - WS-G-2.1 Decommissioning of Nuclear Power Plants and Research Reactors;
 - WS-G-2.2 Decommissioning of Medical, Industrial and Research Facilities;
 - WS-G-2.4 Decommissioning of Nuclear Fuel Cycle Facilities;
 - RS-G-1.7 Application of the Concepts of Exclusion, Exemption and Clearance;
 - WS-R-3 Remediation of Areas Contaminated by Past Activities and Accidents;
 - WS-G-5.1 Release of Sites from Regulatory Control on Termination of Practices
 - WS-G-5.2 Safety Assessment for the Decommissioning of Facilities Using Radioactive material

Guidance on implementation of the above-mentioned standards is given in a number of Technical and Safety Reports, and other documents published by the IAEA – see Appendix C.

- NEA/CNRA has issued (February 2000) a report on *Regulatory Practices for Decommissioning of Nuclear Facilities with Special Regard to Regulatory Inspection Practices*. The report can be downloaded from the web: [<http://www.nea.fr/html/nsd/docs/1999/cnra-r99-4.pdf>].
- NEA/CNRA has issued in April 2003 a report entitled: *The Regulatory Challenges of Decommissioning Nuclear Reactors*. The report can be downloaded from the web at: [<http://www.nea.fr/html/nsd/reports/nea4375-decommissioning.pdf>] (in PDF format). This publication is also available in French as: *Les autorités de sûreté face au démantèlement des réacteurs nucléaires*.
- The IAEA has published a Technical Document *Planning, Managing and Organizing the Decommissioning of Nuclear facilities: Lessons Learned*, (IAEA-TECDOC-1394 [2004]) and two Technical Reports *Decommissioning of Small Medical, Industrial and Research Facilities* (TRS 414) and *Transition from Operation to Decommissioning of Nuclear Installations* (TRS 420).

- IAEA has published Safety Reports on *Safe enclosure of nuclear facilities during delayed dismantling* (SRS 26), and *Safety considerations in the transition from operations to decommissioning of nuclear facilities* (SRS 36).
- The IAEA also published the Safety Report No. 45 *Standard Format and Content for Safety Related Decommissioning Documents*.
- In 2011 IAEA published a Nuclear Energy Series report NW-T-2.1 *Selection and Use of Performance Indicators in Nuclear Decommissioning Projects*, where indicators are identified and evaluated. The report aims to assist the application of management controls in decommissioning projects.
- The WPDD Topical Session *Emerging issues and trends in regulatory practices during the decommissioning and dismantling of nuclear power plants* held in Paris, October 24, 2006. Proceedings are freely available on <http://www.nea.fr/documents/ok/2007/rwm/rwm-wpdd2007-3.pdf>.

1.5 Will all national D&D sites be returned for unrestricted (or restricted) use?

- The NEA/WPDD and RWMC-RF references in Section 1.1 contain relevant information.
- The NEA/WPDD has held a topical Session on *Building & Site Release and Reuse* at its meeting in June 2002. The proceedings [[NEA/RWM/WPDD\(2002\)8](#)] are available and downloadable from the WPDD web page.
- In March 2003 the NEA/RWMC Regulators' Forum held a topical session on regulatory criteria for removal of regulatory controls. In September 2004 the Regulators' Forum issued the report *Removal of Regulatory Controls for Materials and Sites. National Regulatory Positions* with number [NEA/RWM/RF\(2004\)6](#). The report can be downloaded from the webpage [<http://www.nea.fr/html/rwm/regulator-forum.html>].
- The NEA publication *Releasing the Sites of Nuclear Installations* ISBN 92-64-02307-0 which was printed in 2006.
- IAEA Technical Report TRS-444 (2006) *Redevelopment of Nuclear Facilities after Decommissioning* provides numerous examples of reuse/redevelopment of nuclear facilities after decommissioning. A follow-up report giving numerous practical case histories derived from either the nuclear or the non-nuclear sector has been approved for publication.
- In 2006 the IAEA published guidance on *Release of Sites from Regulatory Control upon Termination of Practices* (Safety Guide WS-G-5.1). In 2012 a related report, Safety Reports Series No. 67 *Monitoring for Compliance with Exemption and Clearance Levels* was published. The latter report is also applicable to the release of sites at the end of decommissioning.

1.6 What are the basic regulatory principles and/or approaches that determine how clearance and recycling of material should be handled?

- *Emerging Trends and Issues in Regulatory Practices during Decommissioning and Dismantling of Nuclear Power Plants. Proceedings of the WPDD Topical Session held on 24 October 2006* is available at <http://www.nea.fr/documents/ok/2007/rwm/rwm-wpdd2007-3.pdf>

- See the NEA/RWMC Regulators' Forum document: *Removal of Regulatory Controls for Materials and Sites. National Regulatory Positions* [[NEA/RWM/RF\(2004\)6](#)] as mentioned above.
- A NEA/CRPPH expert group on the Regulatory Application of Authorisation (EGRA) is looking at principles for authorized releases (see above).
- The NEA publication *Releasing the Sites of Nuclear Installations* ISBN 92-64-02307-0 which was printed in 2006 gives some views on the concepts for clearance and release.
- The US National Academy of Sciences /Board on Energy and Environmental Systems has issued the report: *The disposition dilemma: controlling the release of solid materials from USNRC-licensed facilities* (2002), see <http://fermat.nap.edu/books/0309084172/html>
- A Topical Session on *Materials Management* was organized at the WPDD meeting in Dec. 2001 [downloadable at: <http://www.nea.fr/html/rwm/docs/2002/rwm-wpdd2002-7.pdf>]
- *Recycle and Reuse of Materials* is a Working Area of the CND.
- EU Council Directive 96/29/EURATOM (Article 5) has requirements relating to disposal, recycling or re-use of radioactive materials.
- *EU Council Directive 2011/70/EURATOM establishing a Community framework for the responsible and safe management of spent fuel and radioactive waste* stipulates as a general principle that Member States shall ensure that the generation of radioactive waste is kept to the minimum practicable, in terms of both activity and volume, by means of appropriate design measures and of operation and decommissioning practices, including recycle and reuse of conventional materials.
- The IAEA has published a *Safety Guide on Application of the Concepts of Exclusion, Exemption and Clearance* (RS-G-1.7) which provides reference levels of activity concentrations for release of bulk material from regulatory control. A complementary Safety Report (No. 44) provides details on the scenarios and calculation assumption used for the derivation of the levels, recommended in RS-G-1.7. This issue is addressed in the revised *International Basic Safety Standards for Protection Against Ionizing Radiation and for the Safety of Radiation Sources* as well.
- International symposia on clearance of material were held in Germany, organised by TÜV-Nord (Germany) in cooperation with EC, NEA and IAEA, in March 2006 and in September 2009 – see: http://www.tuevnord.de/cps/rde/xchg/tng_en/hs.xsl/Trade_fairsevents_1829_clearance_ENG_PRODUCTIVE.htm

1.7 What are the necessary funding arrangements?

1.7.1 How are financial guarantees built into the D&D policy and its implementation?

- These questions are touched upon in the proceedings from the WPDD Topical Session on Funding held in Paris November 9, 2004. The proceedings can be downloaded from the NEA webpage <http://www.nea.fr/html/rwm/wpdd.html>.
- The NEA Status Report *Decommissioning Funding. Ethics, Implementation, Uncertainties* (NEA No. 5996) deals with this issue.

1.7.2 What are funding schemes including decommissioning liabilities?

- The NEA/RWMC has held a topical session (March 2003) on *Liabilities identification and management at a national level*. The proceedings were issued in October 2003 and are publicly available at the NEA website with document number [NEA/RWM\(2003\)14](#). The NEA/WPDD information platform of national fact sheets (See Section 1.1) has relevant information.
- The NEA Status Report *Decommissioning Funding. Ethics, Implementation, Uncertainties* (NEA No. 5996) addresses this issue.
- The NEA/NDC report [Decommissioning Nuclear Power Plants: Policies, Strategies and Costs](#) (2003) has relevant information.
- The EC has published in its Official Journal (OJ L 330/31, 28.11.2006) the Commission Recommendation on *the management of financial resources for the decommissioning of nuclear installations, spent fuel and radioactive waste*. The purpose of the recommendation is to ensure adequate financial resources for decommissioning and waste management activities to be available for the purpose for which they have been established and to be managed with full transparency. The recommendation can also be downloaded from the Europa website: http://ec.europa.eu/energy/nuclear/publications/decommissioning_en.htm.
- The EC published in 2007 its second report to the European Parliament and the Council on the use of financial resources earmarked for the decommissioning of nuclear installations, spent fuel and radioactive waste. The report compares funding practices in the Member States with the Commission Recommendation. The first (from 2004) and second report with their corresponding working documents can be downloaded from the EUROPA website: http://ec.europa.eu/energy/nuclear/publications/decommissioning_en.htm.
- The TEGDE committee of the IAEA has prepared a report on this issue which was published in 2005 (TECDOC-1476, *Financial Aspects of Decommissioning*), see Appendix C. Currently the functions of TEGDE have been taken over by the International Decommissioning Network and other networking activities of the IAEA.

1.8 How should D&D be regulated to ensure the necessary safety and environmental protection?

- Relevant information can be found in the NEA/CNRA report *The Regulatory Challenges of Decommissioning Nuclear Reactors*, NEA No. 4375, ISBN: 92-64-02120-5, available on the Web at: [<http://www.nea.fr/html/nsd/reports/nea4375-decommissioning.pdf>]. The issue was also discussed in Session 7 of the NEA workshop *Safe, Efficient, and Cost-effective Decommissioning* held in Rome September 2004.
- The WPDD has organised and documented a Topical Session on the *Safety Case for Decommissioning* in December 2001 [[NEA/RWM/WPDD\(2002\)2](#)]. It is downloadable at: [<http://www.nea.fr/html/rwm/docs/2002/rwm-wpdd2002-2.pdf>]. A status report entitled *Achieving the Goals of the Decommissioning Safety Case* was issued in April 2005 with the number [[NEA/RWM/WPDD\(2005\)3](#)] and is available at the NEA webpage [<http://www.nea.fr/html/rwm/wpdd.html>].
- The IAEA has published in 2006 a Safety Requirements document *Decommissioning of Facilities using Radioactive Material*, WS-R-5, that provides recommendations on the authorisation and regulation of decommissioning. The supporting Safety Guides WS-G-2.1,

WS-G.2.2 and WS-G.2.4 also provided more specific details. These guides are under revision. Revision of the Safety Requirements is planned for 2011.

- The NEA/WPDD status report on *Regulating the Decommissioning of Nuclear Facilities: Relevant Issues and Emerging Practices* (NEA No. 6401), published in 2008, provides useful insights into current practices.
- *EU Council Directive 2011/70/EURATOM establishing a Community framework for the responsible and safe management of spent fuel and radioactive waste* stipulates¹⁷ that each Member State has to establish and maintain a national legislative, regulatory and organisational framework for spent fuel and radioactive waste management, including amongst others national requirements for safety and enforcement actions.

¹⁷ See webpage: <http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=OJ:L:2011:199:0048:0056:EN:PDF>

2. Strategy

Decommissioning *Strategy* is taken to include all factors that need to be considered when applying to national competent authorities for permission to decommission. For example, the time scale for safe-store, proposed site disposition and use after decommissioning, technical aspects of decommissioning activities, etc.

2.1 *When is it suitable to carry out D&D? Which decommissioning option should be used - deferred, immediate or safe enclosure?*

- *Approaches and Practices in Decommissioning of Facilities and Management of Radioactive Waste from Non-Nuclear Fuel Cycle Related Activities: Proceedings of the Topical Session of the 40th Meeting of the RWMC* ([NEA/RWM\(2007\)9](#)) are available on the NEA website.
- An International Seminar on *Decommissioning Strategy Selection* was organised by the NEA/WPDD in Tarragona, Spain in September 2003. The Proceedings are available from the NEA bookshop.
- A NEA Status Report *Selecting Strategies for the Decommissioning of Nuclear Facilities* ISBN 92-64-02305-4, was issued in 2006 and deals with these issues.
- IAEA Technical Report TRS-444 (2006) *Redevelopment of Nuclear Facilities after Decommissioning* focuses *inter alia* on site redevelopment as an element affecting the decommissioning strategy.
- The IAEA Safety Report on *Decommissioning Strategies for Facilities Using Radioactive Material* (SRS-50, 2007) discusses the factors affecting safety of decommissioning when immediate dismantling, deferred dismantling or entombment is selected.
- The IAEA Nuclear Energy Series Report NW-G-2.1 (2012) *Policies and Strategies for the Decommissioning of Nuclear and Radiological Facilities* addresses this issue.
- EC study on *Analysis of factors influencing the selection of strategies for decommissioning of nuclear installations*. Final report can be downloaded from the Europa website: http://ec.europa.eu/energy/nuclear/publications/decommissioning_en.htm.
- EC study on *Inventory of best practices in the decommissioning of nuclear installations*. Final report can be downloaded from the Europa website: http://ec.europa.eu/energy/nuclear/publications/decommissioning_en.htm.

2.1.1 *For how many years is safe storage suitable?*

- The IAEA has published a Technical Document *On-site disposal of nuclear facilities as a decommission strategy* [IAEA-TECDOC-1124(2000)]. The document mainly deals with the ‘Entombment’ strategy.
- *Strategies, Policies and Funding* is a Working Area of the CND.
- An IAEA Safety Report on *Safe enclosure of nuclear facilities during delayed dismantling* has been published (SRS 26, 2002).
- The report *The Roles of Storage in the Management of Long-lived Radioactive Waste. Practices and Potentialities in OECD Countries* (the RoST report) RWMC, ISBN 92-64-02315-1.

2.2 *2.2 How dependent is the D&D strategy on the existence of waste management policies and facilities?*

- An International Seminar on *Decommissioning Strategy Selection* was organised by the NEA/WPDD in Tarragona, Spain in September 2003. The Proceedings are available at the NEA bookshop.
- The 2006 NEA Status Report *Selecting Strategies for the Decommissioning of Nuclear Facilities* ISBN 92-64-02305-4, touch upon this issue.

2.2.1 *How is the D&D strategy harmonised with the long-term waste management strategy?*

- The IAEA has published a Technical Document *On-site disposal of nuclear facilities as a decommissioning strategy* [IAEA-TECDOC-1124 (2000)], which deals mainly with the entombment strategy.
- The 2006 NEA Status Report *Selecting Strategies for the Decommissioning of Nuclear Facilities* ISBN 92-64-02305-4, touches on this issue in Section 3.1.5 on page 19-20.
- The NEA/NDC report [*Decommissioning Nuclear Power Plants: Policies, Strategies and Costs*](#) (2003) has relevant information.
- The IAEA published TRS-441 *Management of Problematic Waste and Material Generated during the Decommissioning of Nuclear Facilities* in 2005.
- IAEA Safety Guide WS-G-5.2 *Safety Assessment for Decommissioning of Facilities* using radioactive Material (currently DS376) addresses the relationship and dependence on waste management.
- The IAEA international projects on Evaluation and Demonstration of Safety during Decommissioning (“DeSa”) explored *inter alia* the relationship and dependence of decommissioning and waste management. WS-G.5.2 draws upon the outcomes of the DeSa project.

2.2.2 *What waste disposal arrangements (especially repositories) and precautions are necessary?*

- The NEA/WPDD and RWM-RF information platforms, see Section 1.1, have relevant information.
- The NEA/NDC report [*Decommissioning Nuclear Power Plants: Policies, Strategies and Costs*](#) (2003) surveys the drivers behind national strategies, including the availability of waste disposal facilities.
- The IAEA has published a report dealing *inter alia* with the dispositioning of lower level decommissioning waste and materials. It illustrates several industrial options to safely and cost-effectively manage materials and waste resulting from decommissioning. It presents several release modes including radioactive or conventional disposal, recycling and entombment (TRS-462, 2008).
- An IAEA-TECDOC was published illustrating the results of a *Coordinated Research Project on disposal of low and intermediate level decommissioning waste* (IAEA-TECDOC-1572, 2007).
- The IAEA has developed *Safety Requirements for Near Surface Disposal* (WS-R-1), supported by the Safety Guide on *Safety Assessment for Near Surface Disposal* (WS-G.1.1).

In addition, Safety Series WS-R-4, *Safety Requirements for Geological Disposal*, was published in 2006.

- An IAEA International Project on the *Application of the Safety Assessment Methodology (ASAM)* was completed in 2006. The report of this project also addresses consideration of heterogeneity of waste disposed in near surface facilities.

2.3 *At what cost - also radiological - should dismantling be carried out?*

- In 1999 the NEA jointly with IAEA and EC published a document titled *A Proposed Standardised List of Items for Costing Purposes in the Decommissioning of Nuclear Installations, Interim Technical Document*. The NEA Co-operative Project on Decommissioning (CPD) was instrumental in preparing this document which is freely available at the webpage <http://www.nea.fr/html/rwm/reports/1999/costlist.pdf>. The three organisations collaborated between 2009 - 2011, under the umbrella of the WPDD's Decommissioning Cost Estimation Group (DCEG), on the preparation of a revised version of this document, now titled the *International Structure for Decommissioning Costing*.
- The 2006 NEA Status Report *Decommissioning Funding. Ethics, Implementation, Uncertainties* (NEA No. 1996) discusses this question in its Section 4.4.
- The IAEA has published *Review of selected cost drivers for decision on continued operation of older nuclear reactors* (IAEA-TECDOC-1084, 1999).
- The *Standardised Decommissioning Cost Estimating of WWER-440 Nuclear Power Plant Project/EC* is developing a Standardised Decommissioning Cost Estimate of WWER-440 reactors, based on the previously developed *Proposed Standardised List of Items for Costing Purposes*. A similar document was published by the IAEA (IAEA-TECDOC-1322, 2002)
- In 2010 NEA (WPDD) published a report on *Cost Estimation for Decommissioning: An international overview of cost elements, estimation practices and reporting requirements*. An associated booklet was published jointly with IAEA on the same topic, entitled *Towards Greater Harmonisation of Cost Estimates*.
- *Decommissioning Costs* is a Working Area of the CND.

2.4 *How does one arrive at generic 18 estimates of dismantling costs as function of D&D strategy in order to determine decommissioning funding costs?*

- The NEA/NDC Report [*Decommissioning Nuclear Power Plants: Policies, Strategies and Costs*](#) (2003) addresses this question.

18. This question is also linked to question 3.5.

3. Implementation

3.1 What should be the contents of an EIA for D&D?

- A study has been published in June 2001 by the EC Environment Directorate titled *Environment Impact Assessment for the Decommissioning of Nuclear Installations - Final Report* [Contract B4-3040/99/136035/MAR/C2]
- *Consolidated NMSS Decommissioning Guidance* (Sept. 2002) issued by NRC [NUREG-1757, Vol. 1] in which some chapters (15-17) deals with EIA.
- Council Directive 97/11/EC of 3 March 1997 amending Directive 85/337/EEC on *the assessment of the effects of certain public and private projects on the environment*. It specifically includes the decommissioning of nuclear installations.
- The topical session at the WPDD meeting in December 2001 has examined the safety cases decommissioning within an EIA context, see Section 1.8.

3.2 How is a safety case set up and managed?

3.2.1 What are the elements of a D&D safety case?

- Relevant information can be found in the report titled *Achieving the Goals of the Decommissioning Safety Case* in April 2005 with the number [[NEA/RWM/WPDD\(2005\)3](#)]. This report is freely available at the NEA webpage: [<http://www.nea.fr/html/rwm/wpdd.html>].
- The IAEA has developed safety standards (WS-R-5) and safety guides, supported by Safety Report 45, see Appendix C, that describes the safety related documents required for authorisation, regulation and completion of decommissioning activities. A Safety Guide on *Safety Assessment for the Decommissioning of Facilities Using Radioactive Materials* (WS-G-5.2) was published in 2008.
- *Council Directive 2011/70/EURATOM establishing a Community framework for the responsible and safe management of spent fuel and radioactive waste*¹⁹ requires in article 7 to regularly assess, verify and continuously improve, as far as is reasonably achievable, the safety of the radioactive waste and spent fuel management facility or activity in a systematic and verifiable manner. This shall be achieved through an appropriate safety assessment, other arguments and evidence.

3.2.2 How wide is the range of assumptions needed for accident analysis?

- The proceedings of the WPDD Topical Session on the *Safety Case for Decommissioning* (December 2001) provides relevant information, see Section 1.8.
- *Institutional, Legal, Regulatory Aspects, Licensing and Decommissioning Plan* is a Working Area of the CND.

19. See webpage: <http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=OJ:L:2011:199:0048:0056:EN:PDF>

3.2.3 *What is the experience and lessons learned that can be fed back to the process of regulating decommissioning activities including criteria for judging safety cases?*

- The proceedings of the Topical WPDD Topical Session on the *Safety Case for Decommissioning* (December 2001) have covered the safety case and the management of change, see Section 1.8.
- A Safety Report on *Safety Documentation* was published by the IAEA (SRS-45. 2005). It describes the format and content of safety related documents needed for decommissioning planning and implementation. It addresses the decommissioning plan, cost estimate, environmental impact statement and safety assessment.
- The Task Group on the Safety Case (TGSC) of the NEA/WPDD issued a status report titled *Achieving the Goals of the Decommissioning Safety Case* in April 2005 with the number [NEA/RWM/WPDD\(2005\)3](#). This report is freely available at the NEA webpage [<http://www.nea.fr/html/rwm/wpdd.html>].
- The issue was also discussed in Session 7 of the NEA workshop *Safe, Efficient, and Cost-Effective Decommissioning* held in Rome (September 2004), see proceedings on CD-Rom published in 2005.
- The IAEA Safety standards (WS-R-5, WS-G-2.1, WS-G-2.2, WS-G-2.4., and WS-G-5.2) address the need for feedback of lessons learned from decommissioning and periodic review of the decommissioning plans.
- The WPDD Topical session *Emerging issues and trends in regulatory practices during the decommissioning and dismantling of nuclear power plants* held in Paris, October 24, 2006. Proceedings are available from the NEA website ([NEA/RWM/WPDD\(2007\)3](#)).
- In 2010 NEA (WPDD) published a report on *Applying decommissioning experience to the design and operation of new plants*. An associated booklet was published jointly with IAEA on the same topic, entitled *Decommissioning considerations for new nuclear power plants*.

3.3 *What type of organisation or implementing framework is best to carry out the D&D programme?*

- IAEA has published: TRS-399, *Management and Organisation for the Decommissioning of Large Nuclear Facilities*, 2000. A follow up document is TECDOC-1394 (2004) *Planning, Organizational and Management Aspects of Decommissioning: Lessons Learned*.
- *Project Management and Planning of Decommissioning* is a working area of the CND.
- An IAEA Technical Report on *Record Keeping for the Decommissioning of Nuclear Facilities: Guidelines and Experience* (TRS 411) has been issued in 2002. A follow up document of long term aspects of record keeping in decommissioning projects was published in 2008 (TRS 467).

3.4 *What are the R&D needs?*

3.4.1 *Decontamination and dismantling techniques*

- The CPD has published a guidance document on decontamination techniques used in decommissioning activities, 1999. See Section 3.4.4.

- The question was touched upon at the NEA workshop *Safe, Efficient, and Cost-effective Decommissioning*, held in Rome September 2004 see reference in Appendix A.
- IAEA has published: TRS-395, *State-of-the-Art Technology for Decontamination and Dismantling of Nuclear Facilities*, 1999.
- At the IAEA, outcomes of R&D work on decommissioning are typically coming up from Coordinated Research Projects (CRP) and are collected in proceedings-like TECDOCs. The following are also relevant: IAEA-TECDOC-1022, *New methods and techniques for decontamination in maintenance or decommissioning operations: Results of a CRP*, 1998; IAEA-TECDOC-1273 *Decommissioning Techniques for Research Reactors - Final report of a Co-ordinated Research Project 1997-2001*, 2002; IAEA-TECDOC-1572, *Disposal Aspects of Low and Intermediate Level Decommissioning Waste*, 2007; IAEA-TECDOC-1602, *Innovative and Adaptive Technologies in Decommissioning of Nuclear Facilities* Final report of a Co-ordinated Research Project 2004-2008, 2008.
- The IAEA recently published the following Technical Reports *The Dismantling of Contaminated Stacks* (TRS-440); *The Decommissioning of Research Reactors: State-of-the-art, Trends and Open Issues* (TRS-446); and *The Decommissioning of Underground Structures, Systems and Components* (TRS-439). Another report on decommissioning of research reactors and other small nuclear facilities by making optimal use of constraint resources was published in 2008 (TRS-463).
- US National Academy of Sciences/National Research Council, *Research opportunities for deactivating and decommissioning DOE Facilities*, Washington, DC, 2001.
- The *Innovative Remote Dismantling Techniques (IRDIT) Project* (EC) is working on:
 - Extension of existing know-how on remote dismantling techniques.
 - Collection and evaluation of specific data on remote dismantling of the RPV and reactor components at a WWER and a western PWR reactor.
 - *Comparison* of different techniques applied to typical reactor types (PWR and WWER).
- In 2011 IAEA published NW-T-2.3 *Handbook on Decontamination and Dismantling Techniques for Small Medical, Industrial and Research Facilities*. This superseded an earlier technical report on the same topic, *Decommissioning of small medical, industrial and research facilities* (TRS 414), issued in 2003.
- The CPD published a report on *Remote Handling Techniques in Decommissioning* ([NEA/RWM/R\(2011\)2](#), 2011).

3.4.2 What R&D has been done for very radioactive reactor internals?

- Innovative dismantling techniques used in the five EU-funded pilot decommissioning projects are briefly described at <http://www.eu-decom.be/introduction/initintroduction.htm>.

3.4.3 What R&D has been done for dismantling concrete and its reuse?

- The European Commission DG-Research has published some reports on these topics; these are available for purchase. A full list together with contact details is available at: <http://www.eu-decom.be/about/initabout.htm>.

- The CPD published a report on *Decontamination and Dismantling of Radioactive Concrete Structures* ([NEA/RWM/R\(2011\)1](#), 2011).

3.4.4 What R&D has been done for decontamination of metals?

- Relevant information can be found in the report *Decontamination Techniques Used in Decommissioning Activities*. This report was prepared by the CPD Task Group on Decontamination in 1999. The report is freely available on the webpage [<http://www.nea.fr/html/rwm/reports/1999/decontec.pdf>].
- The European Commission DG-Research has published some reports on these topics; these are available for purchase. A full list together with contact details is available at: <http://www.eu-decom.be/about/initabout.htm>.

3.4.5. What R&D has been done for dealing with "exotic" and toxic materials (like Na, NaK, Be, Graphite,...)

- The IAEA Technical Report on the *Management of Problematic Waste and Material Generated during the Decommissioning of Nuclear Facilities* TRS-441, was published in 2005. IAEA-TECDOC-1521, 2006 deals with *Characterization, Treatment and Conditioning of Radioactive Graphite from Decommissioning of Nuclear Reactors*.
- The EC is supporting the project CARBOWASTE under the 7th Framework Programme on the treatment and disposal of irradiated graphite and other carbonaceous waste (see website: <http://www.carbowaste.eu>).

3.5 How can costs for individual industrial projects be estimated?

- The NEA/IAEA/EC have published a joint guidance document on cost breakdown structures for analysing and recording costs ("the Yellow Book"), see Appendix A. The three organisations collaborated during 2009 - 2011, under the umbrella of the WPDD's Decommissioning Cost Estimation Group (DCEG), on the preparation of a revised version of this document, now titled the *International Structure for Decommissioning Costing*.
- The EC has finalised a study on *Development of Methodologies for cost calculations and financial planning of decommissioning operations*. The final report is available, see Appendix B.
- The EC has finalised a study on *Comparison among different decommissioning funds methodologies for nuclear installations*. The final report is available, see Appendix B.
- An IAEA Working Group (TEGDE) drafted IAEA-TECDOC-1476 (2005) on *Financial Aspects of Decommissioning*, dealing both with costing methodologies and funding mechanisms for decommissioning.
- A new document intended to develop a simplified, robust costing method for the decommissioning of research reactors is in preparation at the IAEA and is expected to be published in 2012.

3.6 What clearance procedures should be implemented for materials?

- The NEA's Cooperative Programme on Decommissioning (CPD) has produced a report *Radioactivity Measurements at Regulatory Release Levels: A Task Group Report*, which is available at <http://www.nea.fr/html/rwm/reports/2006/nea6186-release.pdf>

- The IAEA has issued a Safety Guide entitled *Application of the Concepts of Exclusion, Exemption and Clearance* (RS-G-1.7) which provides international guidance on this issue.
- An IAEA Technical Report (TRS-462, 2008) on *Managing Low Radioactivity Material from the Decommissioning of Nuclear Facilities* includes *inter alia* an extensive discussion on instrumentation and methods to characterize decommissioning waste and materials at levels close to clearance, and how measurements are affected by established clearance criteria.
- IAEA Safety Report Series No. 67 on *Monitoring for Compliance with Exemption and Clearance Values* was published in 2011. This report focuses on monitoring of materials for the purposes of potential release from regulatory control.
- NUREG 1640 *Radiological Assessments for Clearance of Materials from Nuclear Facilities* applies, see web page <http://www.nrc.gov/reading-rm/doc-collections/nuregs/staff/sr1640/>
- The EU has issued a series of recommendations to provide the guidance foreseen in Article 5 of Council Directive 96/29/EURATOM (review of current EU guidance in progress):
 - RP 113 *Recommended Radiological Protection Criteria for the clearance of buildings and building rubble arising from the dismantling of nuclear installations (2000)*.
 - RP 122 *Practical use of the concepts of clearance and exemption: Part I: Guidance on general clearance levels for practices (2000)*.
 - RP 89 *Recommended Radiological Protection Criteria for the Recycling of Metal from the Dismantling of Nuclear Installations (1998)*.
 - The NEA/WPDD has published a status report in 2008 *Release of Radioactive Materials and Buildings from Regulatory Control* ISBN 978-92-64-99061-6 (2008).
 - Various US Federal Agencies have published jointly *Multi-Agency Radiation Survey and Assessment of Materials and Equipment (MARSAME)*, NUREG 1572 Supplement 1 – see (for example) <http://www.nrc.gov/reading-rm/doc-collections/nuregs/staff/sr1575/supplement1/index.html>

3.7 What clearance procedures should be implemented for sites?

- The NEA and IAEA have completed a joint study on the environmental remediation of uranium mining and milling facilities and issued a report *Environmental Remediation of Uranium Production Facilities* in Feb 2002.
- The IAEA has published a Safety Requirements document on *Remediation of areas contaminated by past activities and accidents*. A Safety Guide on *Remediation Process for Areas Affected by Past Activities and Accidents* (WS-G-3.1) was published in 2007.
- ANSI N13.12 on *Release of Sites*. See www.ans.org/pi/ps/docs/ps50.pdf
- *Site Characterisation, Remediation and Reuse* is a Working Area of the CND.
- The NEA/WPDD has published a status reports in 2006 *Releasing the Sites of Nuclear Installations* ISBN 92-64-02307-0 (2006).
- In 2012 IAEA published Safety Report Series 67, *Monitoring for Compliance with Exemption and Clearance Levels*. This report focuses on monitoring of sites (land) for the purposes of potential release from regulatory control.

- Various US Federal Agencies have published jointly *Multi-Agency Radiation Survey and Site Investigation Manual* (MARSSIM),– see (for example) <http://www.epa.gov/radiation/marssim/>

3.8 *How to perform the release measurement for very large volumes of materials and complex geometry?*

- Relevant information can be found in the NEA report *Nuclear Decommissioning. Recycling and Reuse of Scrap Metals*. This report was prepared by a CPD Task Group in 1999. The report is freely available on the webpage: [\[http://www.nea.fr/html/rwm/reports/1996/recycling.pdf\]](http://www.nea.fr/html/rwm/reports/1996/recycling.pdf).
- The IAEA has published a Technical Report *Radiological characterisation of shutdown nuclear reactors for decommissioning purposes*, TRS No.389 (1998).

3.9 *What waste treatment technologies have been found to work and what have not?*

3.9.1 *How are special waste items to be dealt with, e.g. large items and reactor internals?*

- Some information can be found in the Proceedings of the WPDD Topical Session on Materials Management. [\[http://www.nea.fr/html/rwm/docs/2002/rwm-wpdd2002-7.pdf\]](http://www.nea.fr/html/rwm/docs/2002/rwm-wpdd2002-7.pdf). See also: [Topical Session on Buildings & Sites Release and Reuse, Karlsruhe, Germany, 17-18 June 2002 \[NEA/RWM/WPDD\(2002\)8\]](#).
- TECDOC-1572 was published by the IAEA in 2007 illustrating the results of a Coordinated Research Project on *Disposal of low and intermediate level decommissioning waste*. It includes cases of special waste items.

3.9.2 *What are good practices for volume reduction?*

- The IAEA has published a Technical Report on the *Minimization of Radioactive Wastes from Decontamination and Decommissioning of Nuclear Facilities*, TRS No. 401 (2001).

4. Stakeholder Information and Involvement

4.1 Informing stakeholders on the safety and manageability of the D&D process

- A compilation of papers on stakeholder involvement *What We Heard within WPDD on Stakeholder Involvement in Decommissioning, 2001-2004* is available at <http://www.nea.fr/html/rwm/docs/2006/rwm-wpdd2006-6.pdf>
- *Stakeholder Involvement in Decommissioning Nuclear Facilities: International Lessons Learnt* is available at <http://www.nea.fr/html/rwm/reports/2007/nea6320-stakeholder.pdf>
- The NEA/WPDD report (2002), see Section 1.1, reviews also stakeholder issues; See also the proceedings of the Tarragona Seminar, see Section 2.1.
- A series of reports from NEA FSC and CRPPH provide useful information on stakeholder issues generally:
 - *The Societal Aspects of Decision Making in Complex Radiological Situations*, Proceedings of an International Workshop, Villigen, Switzerland, 13-15 January 1998, OECD/NEA,1998.
 - *Better Integration of Radiation Protection in Modern Society: Workshop Proceedings*, Villigen Switzerland, 23-25 January 2001, OECD/NEA, 2001.
 - *Policy Issues in Radiological Protection Decision Making: Summary of the 2nd Villigen (Switzerland) Workshop*, January 2001, OECD/NEA 2001.
 - *The Regulator's Evolving Role and Image in Radioactive Waste Management*, NEA 2003, ISBN 92-64-02142-6
 - *Stakeholder Involvement Techniques*, NEA 2004, [NEA/RWM/FSC\(2004\)7](#)
 - *Stepwise Approach to Decision Making for Long-term Radioactive Waste Management*, NEA 2004, ISBN 92-64-02077-2
 - *Learning and Adapting to Societal Requirements for Radioactive Waste Management*, NEA 2004, ISBN 92-64-02080-2
- WPDD and FSC held in 2005 a joint Topical session on *Stakeholder Involvement in Decommissioning Projects*. The Proceedings can be downloaded from the web-page <http://www.nea.fr/html/rwm/docs/2006/rwm-wpdd2006-5.pdf>.
- *Public Perception, Public Relations Aspects of Decommissioning* is a Working Area of the CND.
- An IAEA Nuclear Energy Series report on *Overview of Stakeholder Involvement in Decommissioning* was published in 2009 (NW-T-2.5).
- *EU Council Directive 2011/70/EURATOM establishing a Community framework for the responsible and safe management of spent fuel and radioactive waste*, including also D&D facilities and activities, establishes information to the public and public involvement in the decision making process.

4.2 How can general public be involved in the EIA process?

- Public Information, Consultation and Involvement in Radioactive Waste Management. An International Overview of Approaches and Experiences, NEA 2003, ISBN 92-64-02128-0

- Further information on public involvement can be found in the proceedings of the WPDD Topical Session on Safety Case [[NEA/RWM/WPDD\(2002\)2](#)] and the Status report *Achieving the Goals of the Decommissioning Safety Case* which was published in April 2005 [[NEA/RWM/WPDD\(2005\)3](#)]. This report is freely available at the NEA webpage [<http://www.nea.fr/html/rwm/wpdd.html>].
- *Environmental and Socioeconomic Aspects of Decommissioning* is a Working Area of the CND.
- The IAEA has published a document in 2008 on socio-economic implications of decommissioning (TRS-464)
- See also stakeholder involvement in the previous section.

4.3 Who are the stakeholders?

- See the NEA FSC and CRPPH reports; also WPDD/FSC joint Topical session and the Brochure. All mentioned in Section 4.1.
- The NEA/WPDD report of 2002, see Section 1.1, has relevant information. See also the proceedings of the Tarragona Seminar in Section 2.1.
- In 2009 the IAEA published a document discussing the identification of stakeholders, *An Overview of Stakeholder Involvement in Decommissioning* (NW-T-2.5, 2009).
- The IAEA, together with NEA, EC and WNA has organised an international conference on lessons learned from decommissioning and the safe termination of nuclear practices in December 2006, where social aspects and stakeholder involvement have been discussed. The Proceedings were published in 2007 (see App. C under Other)

5. Transition Phase

5.1 *What are the special aspects of the transition phase from facility operation to decommissioning?*

- The CSNI Special Expert group on *Human and Organizational Factors* organized a workshop on management of change in 2001 and published in June 2004 a paper on *Managing and Regulating Organisational Change in Nuclear Installations*, CSNI Technical Opinion Papers - No. 5, NEA No. 5348, ISBN: 92-64-02069-1, available on the Web at: [<http://www.nea.fr/html/nsd/reports/2004/nea5348-change.pdf>]. The Special Expert Group also co-organised the session on *Management of Transition and Change throughout Decommissioning* during the Workshop on *Safe, Efficient, and Cost-effective Decommissioning* held in Rome September 2004, see proceedings on CD-Rom.
- The NEA Special Expert Group on Human and Organizational factors (SEGHOF) discussed the transition phase during its meeting following the NEA Rome workshop *Safe, Efficient, and Cost-effective Decommissioning* held in Rome September 2004. See Rome workshop proceedings in Appendix A.
- IAEA has published a Technical Report on *Transition from Operation to Decommissioning of Nuclear Installations* (TRS 420), as well as two Safety Reports, *Managing the Early Termination of Operation of Nuclear Power Plants (SRS-31)* and *Safety Considerations in the Transition from Operations to Decommissioning* (SRS 36).
- The IAEA Safety Requirements (WS-R-2, WS-R-5) and Safety Guides (WS-G-2.1, WS-G-2.2, and WS-G-2.4) also provide recommendations on safety considerations during the transition phase from operation to decommissioning.

Annex A

**List of NEA Documents on
Decommissioning and Dismantling of Nuclear Facilities 2003**

Document Type	Titles	NEA References

Annex B

List of EC Documents related to Decommissioning and Decontamination of Nuclear Facilities

All listed documents can be found under: http://ec.europa.eu/energy/nuclear/index_en.htm

Additional documentation is readily accessible via:
<http://www.eu-decom.be/introduction/initintroduction.htm>

Document type	Title
Commission Proposal for a Council Regulation	Proposal for a Council Regulation on Union support for the nuclear decommissioning assistance programmes in Bulgaria, Lithuania and Slovakia. COM(2011)783 final
Commission Report to the European Parliament and the Council	Report from the European Commission to the European Parliament and the Council on the use of financial resources during 2004 – 2009 provided to Lithuania, Slovakia and Bulgaria to support the decommissioning of early shut-down nuclear power plants under the Act of Accessions. COM(2011)432 final
Council Directive	Council Directive 2011/70/Euratom of 19 July 2011 establishing a Community framework for the responsible and safe management of spent fuel and radioactive waste. OJ L 199/48, 2.8.2011
Council Directive	Council Directive 2009/71/EURATOM of 25 June 2009 establishing a Community framework for the nuclear safety of nuclear installations. OJ L 172/18, 2.7.2009
Commission Recommendation	Commission Recommendation on management of financial resources for decommissioning of nuclear installations, spent fuel and radioactive waste. OJ L 330/31, 28.11.2006;
Commission Communication to the European Parliament and Council	Report on the use of financial resources earmarked for the decommissioning of nuclear power reactors COM(2004)719 final; 26.10.2004;
Commission Communication to the European Parliament and Council	Second Report on the use of financial resources earmarked for decommissioning of nuclear installations, spent fuel and radioactive waste. COM(2007)794 final, 12.12.2007

Commission Staff Working Document	EU Decommissioning Funding Data. SEC(2007)1654, 12.12.2007
Report	Study on the development of methodology for cost calculations and financial planning of decommissioning operations.
Report	Analysis of environmental, economic and social issues related to the decommissioning of nuclear installations.
Report	Comparison among different decommissioning funds methodologies for nuclear installations.
Report	Inventory of best practices in the decommissioning of nuclear installations.
Report	Analysis of factors influencing the selection of strategies for decommissioning of nuclear installations.

Annex C

See <http://www-pub.iaea.org/MTCD/publications/series1.asp> for published IAEA reports

List of IAEA Publications on Decommissioning and Decontamination of Nuclear Facilities

Safety Series (SS)	
Manual on Decontamination of Surfaces	Safety Series No. 48 (1979)
Factors Relevant to the Decommissioning of Land-Based Nuclear Reactor Plants (SUPERSEDED)	Safety Series No. 52 (1980)
Safety in Decommissioning of Research Reactors (SUPERSEDED)	Safety Series No. 74 (1986)
The Regulatory Process for the Decommissioning of Nuclear Facilities (SUPERSEDED)	Safety Series No. 105 (1990)
Predisposal Management of Radioactive Waste, Including Decommissioning (SUPERSEDED)	SR No. WS-R 2 (2000)
1. Decommissioning of Nuclear Power Plants and Research Reactors., Safety Guide	SS No. WS-G-2.1 (1999)
2. Decommissioning of Medical, Industrial and Research Facilities, Safety Guide	SS No. WS-G-2.2 (1999)
3. Decommissioning of Nuclear Fuel Cycle Facilities, Safety Guide	SS No WS-G-2.4 (2001)
4. Release of Sites from Regulatory Control upon Termination of Practices	SS No.WS-G-5.1 (2006)
5. Safe Enclosure of Nuclear Facilities During Deferred Dismantling	Safety Reports Series No.26 (2002)
6. Remediation of Areas Contaminated by Past Activities and Accidents (under revision)	SS No. WS-R-3 (2003)
7. Managing the Early Termination of Operation of Nuclear Power Plants	Safety Reports Series No. 31 (2003)

8.	Safety Considerations in the Transition from Operation to Decommissioning of Nuclear Facilities	Safety Reports Series No. 36 (2004)
9.	Application of the Concepts of Exclusion, Exemption and Clearance, Safety Guide	SS No. RS-G-1.7 (2004)
10.	Derivation of Activity Concentration Values for Exclusion, Exemption and Clearance	Safety Reports Series No. 44 (2005)
11.	Standard Format and Content for Safety Related Decommissioning Documents	Safety Reports Series No. 45 (2005)
12.	Decommissioning of Facilities Using Radioactive Material	Safety Requirements No WS-R-5 (2006)
13.	Decommissioning Strategies for Facilities Using Radioactive Materials	Safety Reports Series No. 50 (2007)
14.	Safety Assessment for the Decommissioning of Facilities Using Radioactive Materials, Safety Guide	SS No. WS-G-5.2 (2008)
15.	Monitoring for Compliance with Exemption and Clearance Levels	Safety Reports Series No. 67 (2012)

Technical Reports Series (TRS)

1.	Decontamination of Nuclear Facilities to Permit Operation, Inspection, Maintenance, Modification or Plant Decommissioning	TRS No. 249 (1985)
2.	Methodology and Technology of Decommissioning Nuclear Facilities	TRS No. 267 (1986)
3.	Methods for Reducing Occupational Exposure During the Decommissioning of Nuclear Facilities	TRS No. 278 (1987)
4.	Decontamination and Demolition of Concrete and Metal Structures During the Decommissioning of Nuclear Installations	TRS No. 286 (1987)
5.	Factors Relevant to the Recycling or Reuse of Components Arising from the Decommissioning and Refurbishment of Nuclear Facilities	TRS No. 293 (1988)
6.	Monitoring Programmes for Unrestricted Release Related to Decommissioning of Nuclear Facilities	TRS No. 334 (1992)
7.	Cleanup and Decommissioning of a Nuclear Reactor After a Severe Accident	TRS No. 346 (1992)

8.	Application of Remotely Operated Handling Equipment in the Decommissioning of Nuclear Facilities	TRS No. 348 (1993)
9.	Planning and Management for the Decommissioning of Research Reactors and Other Small Nuclear Facilities	TRS No. 351 (1993)
10.	Decontamination of Water Cooled Reactors	TRS No. 365 (1994)
11.	Decommissioning Techniques for Research Reactors	TRS No. 373 (1994)
12.	Safe Enclosure of Shutdown Nuclear Installations	TRS No. 375 (1995)
13.	Design and Construction of Nuclear Power Plants to Facilitate Decommissioning	TRS No. 382 (1997)
14.	Decommissioning of Nuclear Facilities Other than Reactors	TRS No. 386 (1998)
15.	Radiological Characterisation of Shutdown Nuclear Reactors for Decommissioning Purposes	TRS No. 389 (1998)
16.	State-of-the-art Technology for Decontamination and Dismantling of Nuclear Facilities	TRS No. 395 (1999)
17.	Organization and Management for the Decommissioning of Large Nuclear Facilities	TRS No. 399 (2000)
18.	Minimisation of Radioactive Waste from Decontamination and Decommissioning of Nuclear Facilities	TRS No. 401 (2001)
19.	Record keeping for the Decommissioning of Nuclear Facilities: Guidelines and Experience	TRS No. 411 (2002)
20.	Decommissioning of Small Medical, Industrial and Research Facilities	TRS No. 414 (2003)
21.	The Transition from Operation to Decommissioning of Nuclear Installations	TRS No. 420 (2004)
22.	The Power Reactor Information System (PRIS) and its Extension to Non-Electrical Applications, Decommissioning and Delayed Projects Information	TRS No. 428 (2005)
23.	Dismantling of Contaminated Stacks at Nuclear Facilities	TRS No. 440 (2005)

24.	Management of Problematic Waste and Material Generated During the Decommissioning of Nuclear Facilities	TRS No. 441 (2006)
25.	The Decommissioning of Underground Structures, Systems and Components	TRS No. 439 (2006)
26.	Redevelopment of Nuclear Facilities after Decommissioning	TRS No. 444 (2006)
27.	The Decommissioning of Research Reactors; Evolution, State-of-the-art, Open Issues	TRS No. 446 (2006)
28.	Considerations for Waste Minimization at the Design Stage of Nuclear Facilities	TRS No. 460 (2007)
29.	Managing Low Radioactivity Material from the Decommissioning of Nuclear Facilities	TRS No. 462 (2008)
30.	Decommissioning of Research Reactors and Other Small Nuclear Facilities by Making Optimal Use of Available Resources	TRS No. 463 (2008)
31.	Managing the Socioeconomic Impact of the Decommissioning of Nuclear Facilities	TRS No. 464 (2008)
32.	Long Term Preservation of Information for Decommissioning Projects	TRS No. 467 (2008)
Nuclear Energy Series		
1.	Decommissioning of Nuclear Facilities: Training and Human Resources Considerations	NG-T-2.3 (2008)
2.	An Overview of Stakeholder Involvement in Decommissioning	NW-T-2.5 (2009)
3.	Integrated Approach to Planning the Remediation of Sites Undergoing Decommissioning	NW-T-3.3 (2009)
4.	Selection and Use of Performance Indicators in Nuclear Decommissioning Projects	NW-T-2.1 (2011)
5.	Redevelopment and Reuse of Nuclear Facilities and Sites: Case Histories and Lessons Learned	NW-T-2.2 (2011)
6.	Handbook on Decontamination and Dismantling Techniques for Small Medical, Industrial and Research Facilities	NW-T-2.3 (2011)

7.	Policies and Strategies for the Decommissioning of Nuclear and Radiological Facilities	NW-G-2.1 (2012)
----	--	-----------------

Technical Documents (TECDOC)

	Decommissioning of Nuclear Facilities (SUPERSEDED)	IAEA-179 (1975)
	Decommissioning of Nuclear Facilities 1977 Edition (SUPERSEDED)	IAEA-205 (1977)
	Decontamination of Operational Nuclear Power Plants (SUPERSEDED)	IAEA-TECDOC-248 (1981)
1.	Decontamination and Decommissioning of Nuclear Facilities: Final Report of Three Research Meetings (1984-87)	IAEA-TECDOC 511 (1989)
2.	Decontamination of Transport Casks and of Spent Fuel Storage Facilities	IAEA-TECDOC-556 (1990)
3.	Factors Relevant to the Sealing of Nuclear Facilities	IAEA-TECDOC-603 (1991)
4.	Considerations in the Safety Assessment of Sealed Nuclear Facilities	IAEA-TECDOC-606 (1991)
5.	National Policies and Regulations for Decommissioning Nuclear Facilities	IAEA-TECDOC-714 (1993)
6.	Decontamination and Decommissioning of Nuclear Facilities - Results of a CRP, Phase II: 1989-1993	IAEA-TECDOC-716 (1993)
7.	New Methods and Techniques for Decontamination in Maintenance or Decommissioning Operations - Results of a Co-ordination Research Programme, 1994-1998	IAEA-TECDOC-1022 (1998)
8.	Technologies for Gas Cooled Reactor Decommissioning, Fuel Storage and Waste Disposal, TCM Jülich, Germany, Sep 1997	IAEA-TECDOC-1043 (1998)
9.	Spent Fuel Storage and Transport Cask Decontamination and Modification	IAEA-TECDOC-1081 (1999)
10.	On-site Disposal as a Decommissioning Strategy	IAEA-TECDOC-1124 (1999)
11.	The Decommissioning of WWER-Type Nuclear Power Plants	IAEA-TECDOC-1133 (2000)

12.	Nuclear Graphite Waste Management -Technical Committee Meeting , Manchester, United Kingdom, 18-20 Oct 1999	CD-ROM (2001)
13.	Decommissioning Techniques for Research Reactors- Final report of a Co-ordinated Research Project 1997-2001	IAEA-TECDOC-1273 (2002)
14.	Safe and Effective Nuclear Power Plant Life Cycle Management Towards Decommissioning	IAEA-TECDOC-1305 (2002)
15.	Decommissioning Costs of WWER-440 Nuclear Power Plants. Interim Report: Data Collection and Preliminary Evaluations	IAEA-TECDOC-1322 (2002)
16.	Planning, Organizational and Management Aspects of Decommissioning: Lessons Learned	IAEA-TECDOC-1394 (2004)
17.	Operational and Decommissioning Experience with Fast Reactors	IAEA-TECDOC-1405 (2004)
18.	Financial Aspects of Decommissioning	IAEA-TECDOC- 1476 (2005)
19.	Selection of Decommissioning Strategies: Issues and Factors	IAEA-TECDOC-1478 (2005)
20.	Characterization, Treatment and Conditioning of Radioactive Graphite from Decommissioning of Nuclear Reactors	IAEA-TECDOC-1521 (2006)
21.	Disposal Aspects of Low and Intermediate Level Decommissioning Waste –Results of a Co-ordinated Research Project 2002-2006	IAEA-TECDOC-1572 (2007)
22.	Innovative and Adaptive Technologies in Decommissioning of Nuclear Facilities- Final report of a Co-ordinated Research Project 2004-2008	IAEA-TECDOC-1602 (2008)
23.	Decommissioning of Fast Reactors after Sodium Draining	IAEA-TECDOC-1633 (2009)
